

APPROXIMATELY **49,600** CASES OF ENDOMETRIAL CANCER ARE DIAGNOSED EACH YEAR IN THE UNITED STATES.<sup>1</sup>

It is the most common cancer of the female reproductive organs.

More cases of endometrial cancer occur each year than **ovarian cancer and cervical cancer combined**.<sup>1</sup>

THE ENDOMETRIUM IS THE MEMBRANE LINING THE UTERUS

**EXCESS BODY WEIGHT INCREASES RISK<sup>2</sup>**

**BEING ACTIVE DECREASES RISK<sup>2</sup>**

The American Institute for Cancer Research estimates that

# 59%

of U.S. endometrial cancer cases, or about

# 3 in 5

**could be prevented by being at a healthy weight and being physically active.<sup>2</sup>**

That's roughly **29,200** cases each year that never have to happen.

## Yet TODAY...

**Roughly 7 out of every 10**

American women are overweight or obese.<sup>3</sup>

**More than half of American women**

do not get enough activity to protect themselves.<sup>4</sup>

The evidence is the latest from the AICR/WCRF Continuous Update Project (CUP) which systematically updates and reviews the research conducted worldwide into cancer risk related to diet, physical activity and body weight. All the evidence gathered is then assessed by a panel of independent scientists who make recommendations for cancer prevention.
